H.7 Non-road Equipment Engine Emissions Requirements.

Environmental Protection Agency (EPA)'s Tier IV non-road exhaust emission standards require the engine manufacturers to use pollution control technologies, to include but not limited to exhaust gas recirculation (EGR), catalytic converts, NOX absorbers. These pollution control technologies are sensitive to fuel sulfur above 15 ppm and therefore are not compatible with military fuels such as JP-8/JP-5 that allow up to 3,000 ppm sulfur. Therefore, EPA has granted TACOM LCMC a National Security Exemption (NSE) from the Tier IV standards for all non-road, non-armored equipment. (Reference paragraph 3.3.22 of the PD for specific emissions requirements for the system under this contract.) The Government can and intends to transfer the NSE to the engine manufacturer, as needed, so that no vehicles delivered under this contract will have Tier IV engines. In order to perform the transfer of the NSE, the contractor shall complete the NSE transfer form by following the directions provided on the form. The form is available from the website indicated below.
